## SUMMARY

---

Product Designer with 6+ years of experience delivering end-to-end design across mobile, web, and SaaS products. Skilled in interaction design, design systems, prototyping at all fidelity levels, and AI-augmented workflows including code-assisted prototyping and design-to-engineering collaboration. Strong remote work background with domain experience across field service management, fintech, payments, e-commerce, and consumer products.

## EXPERIENCE

---

**Product Designer** ServCraft July 2025 – Present · Contract

*Digital field service management (FSM) SaaS platform for installation, repair, maintenance, and security businesses.*

- Delivered end-to-end product design for 5,000+ monthly active users across complex workflows — billing, scheduling, and software integrations — directly enabling a price increase from R 299 to R 349 per user per month.
- Shipped UI improvements and UX fixes directly to production using Claude Code, and used AI tools to conduct deep codebase research — grounding design decisions in technical constraints and reducing engineering back-and-forth.
- Prototyped at multiple fidelity levels — hand sketches, low-fidelity wireframes, interactive HTML prototypes, and high-fidelity Figma specs — selecting the most efficient method for each stage of the design process.
- Extracted and documented a UI component library from the live front-end codebase using Storybook, with Chromatic visual regression testing and accessibility (a11y) add-ons.
- Used Claude to accelerate ideation, draft BRDs, and conduct competitive research — and coached teammates on integrating AI tools into the design process, increasing team design velocity.
- Strengthened the design system and brand foundations, authored the brand book, and produced production-ready specs through advanced interactive prototypes — enabling smoother developer handoffs and faster delivery.

**Product Designer** Credify April 2025 · Part Time

*Fintech platform for importers shipping goods from China to Kampala — supplier payments and shipment-linked financing in one place.*

- Led the design of in-app user flows and micro-interactions for existing offline users, delivering high-quality mobile app designs quickly.
- Led the creation of email templates and user notification strategies, improving customer communication and increasing engagement.

**Design Lead** Onafriq Feb 2022 – Mar 2025 · Full Time

*Digital payment platform enabling scalability across African markets through platform convergence and payment interoperability.*

- Increased bulk payment processing capacity from 1,000 to 5,000 transactions per batch; reduced support queries and increased repeat transactions through targeted UX improvements to the customer portal.
- Restructured the information architecture of a multi-currency card payment admin portal, enabling faster transaction monitoring and more efficient issue resolution.
- Led a cross-functional rebrand effort managing the full mobile app transition from Beyonic to Onafriq across design, development, and go-to-market.

EDUCATION

---

**Certificate in Software Engineering** Moringa School August 2019

SKILLS

---

**Design** Interaction design, UX design, UI design, visual design, mobile design, web design, design systems, prototyping, wireframing, user research, information architecture, branding, accessibility (a11y)

**Tools** Figma, Adobe Creative Suite, Storybook, Chromatic, Claude Code, Gemini, Kombai AI, Jira, Confluence, HTML, CSS, WordPress, Elementor

**Practices** AI-augmented design, code-assisted prototyping, design-engineering collaboration, remote work, async communication, design documentation, stakeholder presentations, coaching and mentoring
